Bonding of plastics

Weicon Plastic-Bond

Muenster, April 2017 – Weicon has released a new adhesive, which has its special strengths in bonding of various plastics - Weicon Plastic-Bond.

High-strength, impact resistant, residual elastic

Weicon Plastic-Bond is a solvent-free structural adhesive. It has a very good adhesion to various plastics and is also suitable for bonding other materials. For example, plastics can also be bonded to aluminum, steel or PVC. The adhesive has a gap filling capacity of five millimeters. It has a high peel strength, is residual elastic and impact resistant and is suitable for both static and dynamic loads.

Bonding even on vertical surfaces

Plastic-Bond is particularly suitable for structural bondings where high strength connections are required. It has a high viscosity and is suitable for processing on vertical surfaces.

Use in many areas

The new structural adhesive is universally applicable and can be used, for example, in plastics technology, in metal construction, in car body and vehicle construction, in caravan construction, in mechanical engineering, in electrical engineering, in wood processing or in construction works at exhibitions.

For industrial and private applications

The adhesive has been developed for industrial applications but is also very suitable for applications in craft and DIY.

For example, the new adhesive can be used for bonding in model construction, in which plastic parts are joined together. Plastic-Bond can also carry out numerous household repairs. Light elements, such as, e.g. LED strips, can be fixed without great effort. This also allows to mount blind strips, edge protection and door signs permanently and easily.
